Title: Landing Page for Content Creator Client

1. Introduction

The landing page aims to showcase the services of a content creator client. It will feature a navigational bar with anchor tags for HOME, SERVICES, and CONTACT, enabling users to navigate between sections. The sections include Home (client's name and photo), Services (content creator and social media marketer description), and Contact (client's contact information).

2. Functional Requirements

2.1 Navigation Bar

The landing page shall have a fixed navigation bar at the top of the page.

The navigation bar shall include three anchor tags: HOME, SERVICES, and CONTACT.

Clicking on each anchor tag shall smoothly scroll to the corresponding section of the page.

2.2 Home Section

The Home section shall display the client's name prominently as a heading.

A placeholder image shall be used to represent the client's photo.

2.3 Services Section

The Services section shall contain two cards: Content Creator and Social Media Marketer.

Each card shall display the service name and a brief description.

2.4 Contact Section

The Contact section shall include the client's contact phone number and email ID.

These details shall be displayed clearly for users to access.

3. Non-Functional Requirements

3.1 Design and Layout

The landing page design shall be responsive and compatible with various devices and screen sizes.

The layout shall be visually appealing and user-friendly.

3.2 Accessibility

The webpage shall be accessible to users with disabilities, following WCAG guidelines.

3.3 Performance

The page loading time shall be optimized for a seamless user experience.

3.4 Browser Compatibility

The landing page shall be compatible with major web browsers (Chrome, Firefox, Safari, Edge).

4. Technology Stack

HTML, CSS, JavaScript for front-end development.

Bootstrap or other responsive frameworks for layout and design.

Dummy images and content for placeholders.

5. Testing

The landing page shall undergo testing for responsiveness, functionality, and cross-browser compatibility before deployment.

User acceptance testing (UAT) shall be conducted to ensure the page meets client expectations.

6. Deployment

The completed landing page shall be deployed on a web hosting platform for public access.

7. Maintenance

Regular maintenance and updates shall be performed to ensure the landing page's functionality and relevance.

8. Constraints

Timeframe for development and deployment.

Client-provided content and images.
